

AVIATION MANAGEMENT SOLUTIONS

CILTNA Fall 2019 Conference

Drone Technology & UTM

New Technologies and Innovation in Transport & Logistics

Eugene Hoeven MBA, ACC. DIR.

President & Founder, EH&A Management Consultants

-

C. Buchanan Kellogg Waukegan
 Lucy Mattinson Takemong
 (Residing in Chicago, Ill.)

Forces of disruption....

Changing customer expectations

Faster, flexibility, and at lower price
B2B wants efficiency and transparency; B2C wants convenience

Technology

Digitalization and data analytics offer vast opportunities
Automation will redefine work & reshape the workforce

New entrants

Asset light or asset-less competitors
Exploiting digital technology and rise of the platform

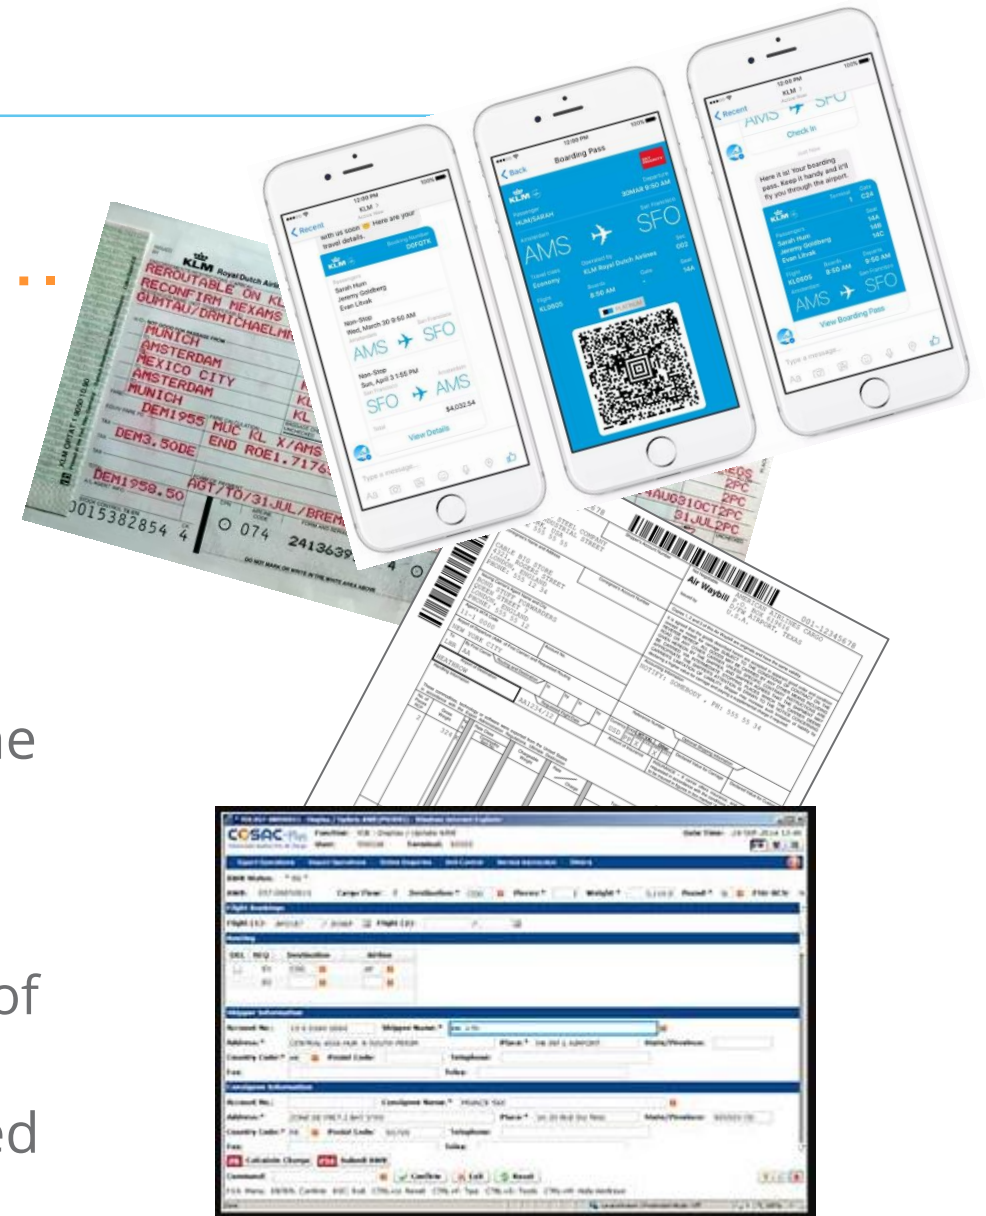

Collaboration redefined

Horizontal collaboration
Need for standardization to increase efficiency

In logistics, it's all about the data....

- Knowing where items are and where they are going
- Being able to act on the data at the right time
- New ways of collecting and handling data
- In air transport, digital processes have become the norm and paper is the exception
 - In 2008, the industry moved to 100% e-ticketing and the paper ticket became a thing of the past.
 - In 2019, the e-AWB became the default contract of carriage
- Global transport and logistics is being transformed by digitization

Delivery drones and driverless vans get much attention....

- Due to exponential growth of e-commerce
- Focus on “last mile” delivery and logistics
- **BUT**, supply chain logistics (i.e. factory-to-factory, facility-to-facility, or warehouse-to-warehouse) accounts for 90% of logistics’ industry’s global revenue
- It involves the integration of information flow, materials handling, production, packaging, inventory, transportation, warehousing, as well as security.

How drones contribute....

- Ability to maneuver around and above difficult to reach places
- Tasks that were previously time-consuming, labour-intensive and hazardous can now be made more efficient and less expensive, improving worker safety
- Equipped with cameras and other sensors, make drones ideal for identifying and inspecting items
- In transport and logistics, a drone is a tool with many uses....

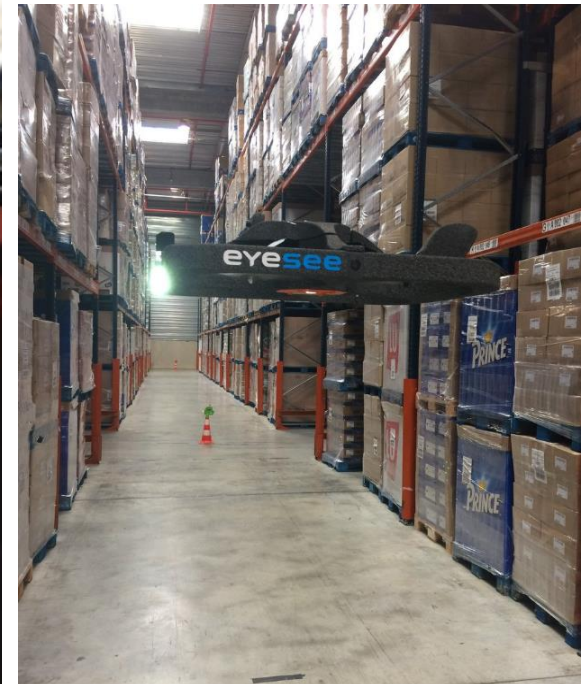

Warehouse & Inventory Management – Inspection & Yard Management – Drone Delivery – Urban Air Mobility (UAM)

Warehouse Management System (WMS)

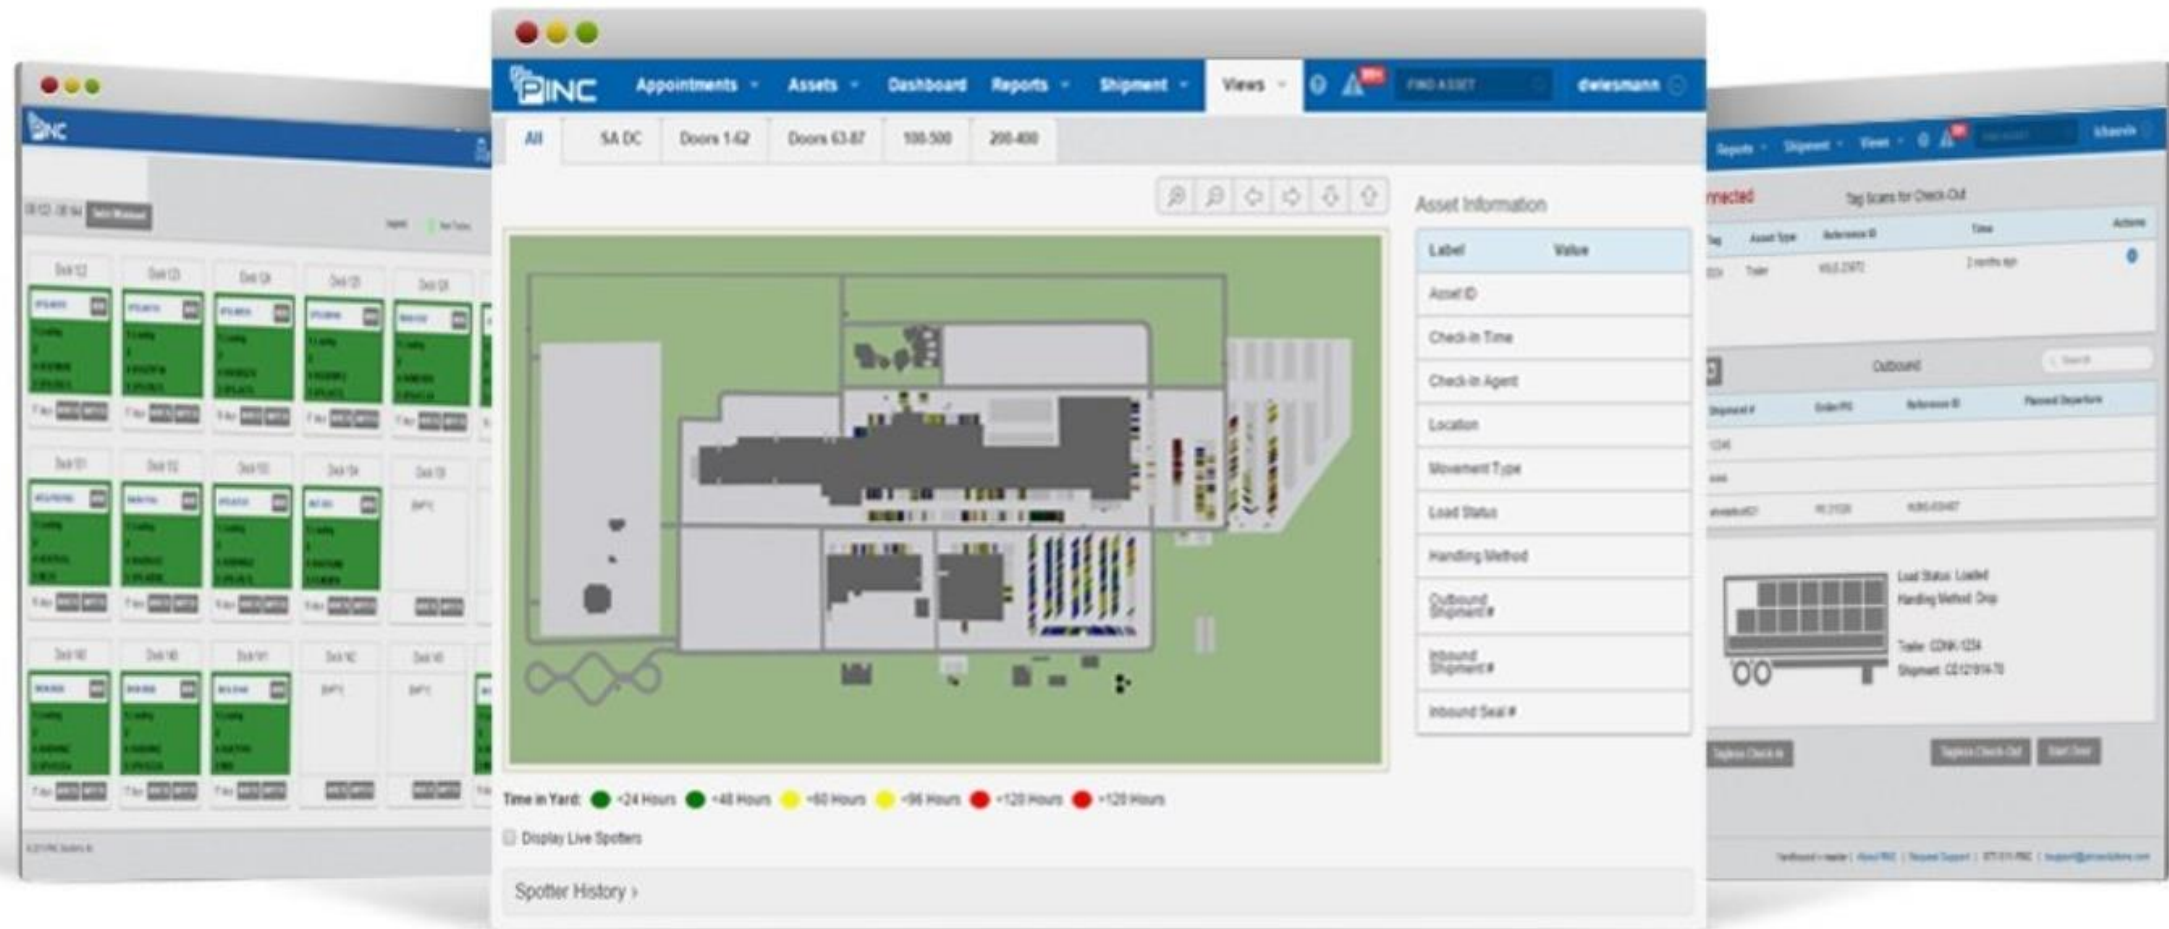

Supply Chain Management (SCM) Applications

Warehouse & Inventory Management

Yard Management – the rise of the digital yard

Just-in-time Delivery.....

Medical Delivery....

SAVING TIME.

SAVING MONEY.

SAVING LIVES.

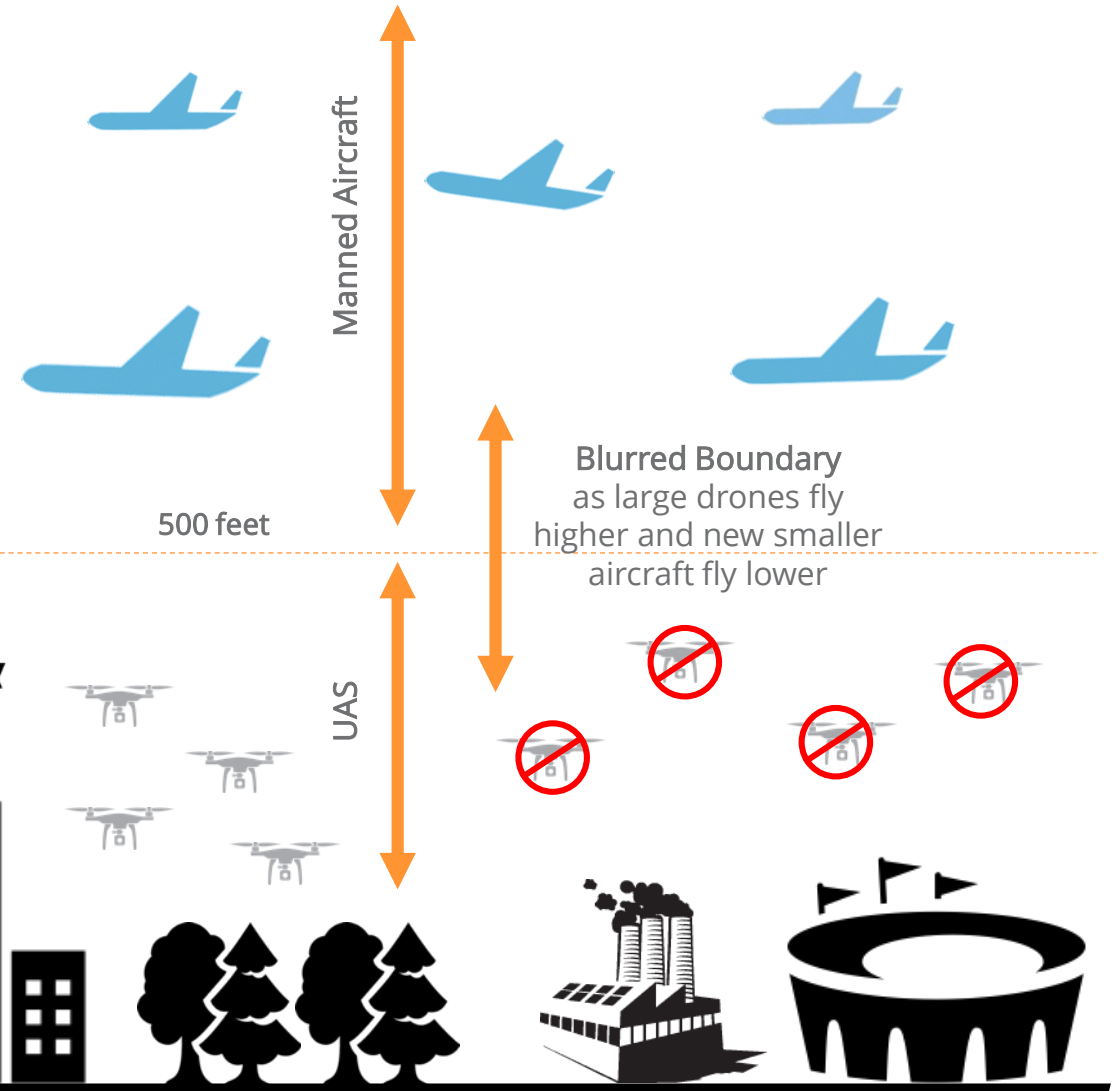

MATTERNET

- Today, drones (or UAS) are typically restricted from flying higher than 500 feet above the ground to avoid conflicts with traditional airspace users
- In addition, airports and critical infrastructure typically have large surrounding no-fly zones prohibiting UAS usage
- With ever-increasing numbers of drones in the air at any one time, the airspace is becoming more and more crowded, with inevitable safety implications
- How can UAS operators avoid conflicts with landing aircraft, helicopters, and (static or dynamic) no-fly zones above critical infrastructure?

An Unmanned Traffic Management (UTM) system that is able to cooperate with and integrate into the existing Air Traffic Management (ATM) system is critical to enabling UAS operations

UTM System – Basic principles

INFORMATION

Airspace legislation
Local Regulations
No drone zones
Wildlife & Private areas
Densely populated areas
Etc.

VALIDATION

Can I fly?

- Yes
- No, because....

Recreational drone users

Commercial drone users

Autonomous drones

NOTIFICATION

Manual
Automatic

Airports
CAA & ANSP
Local authorities,
Police

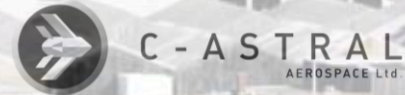

Project SAFIR

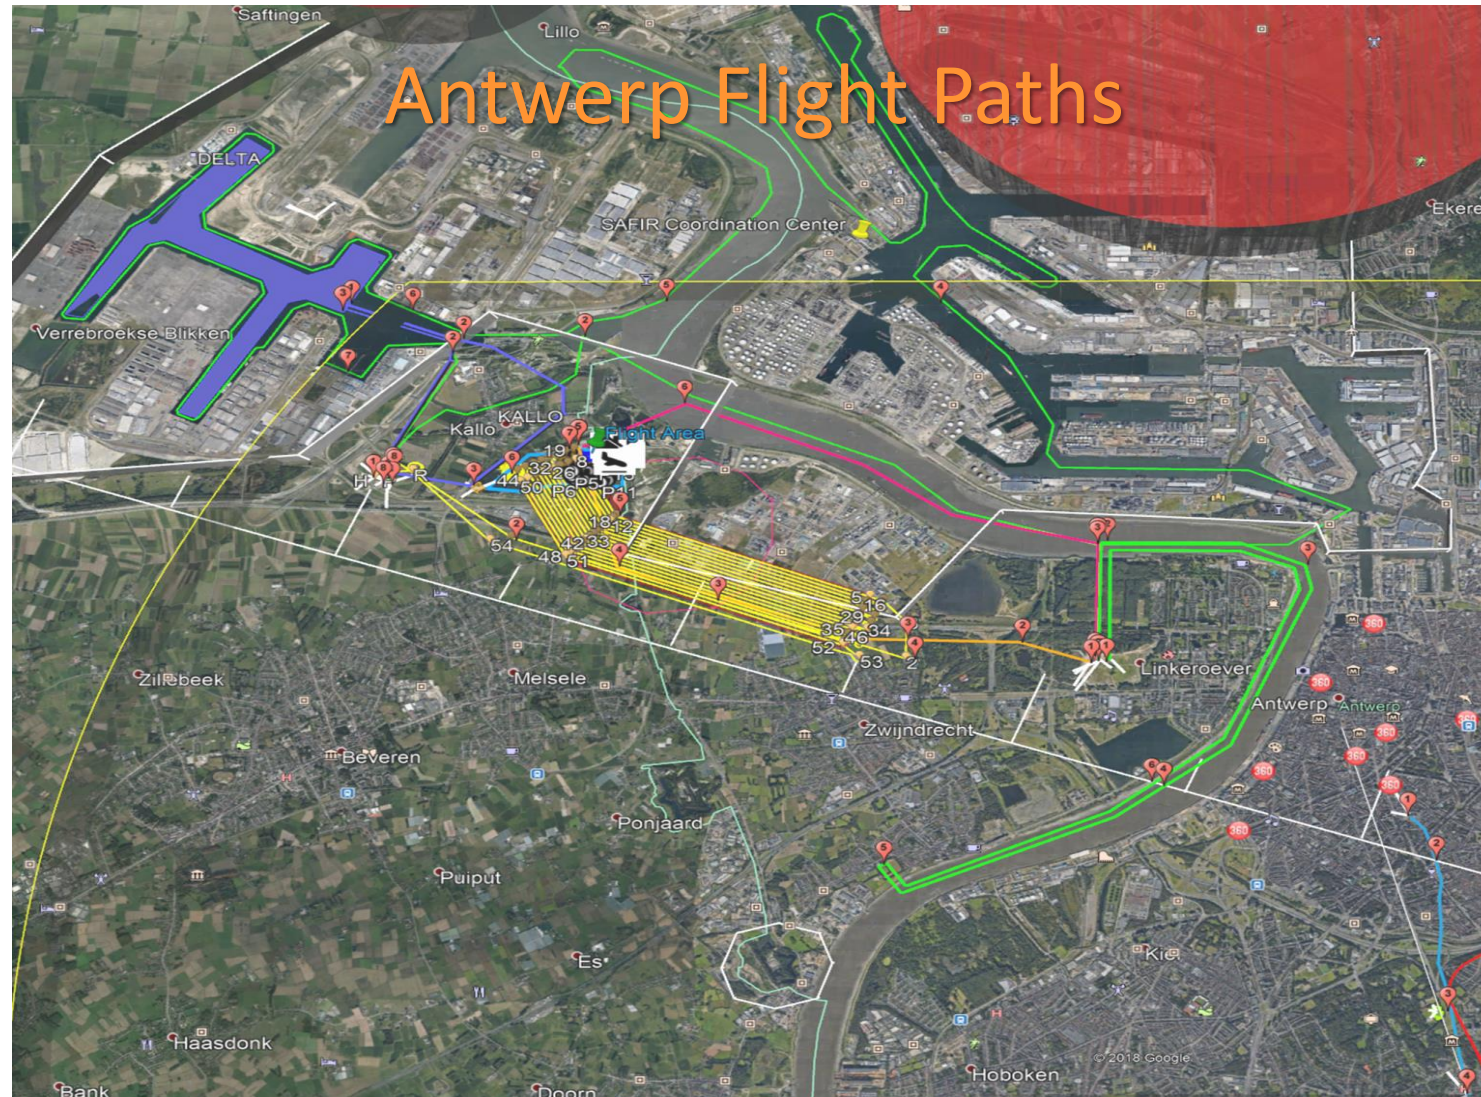

U-space

- SAFIR – Safe And Flexible Integration of Initial U-space Services in a Real Environment
- An ambitious demonstration project to demonstrate several U-space services through the deployment of a multitude of UAS and the simultaneous deployment of several U-space service providers covering a complex operational airspace
- Hosted at the Port of Antwerp in a complex airspace

The UTM ecosystem will grow as the transport industry evolves

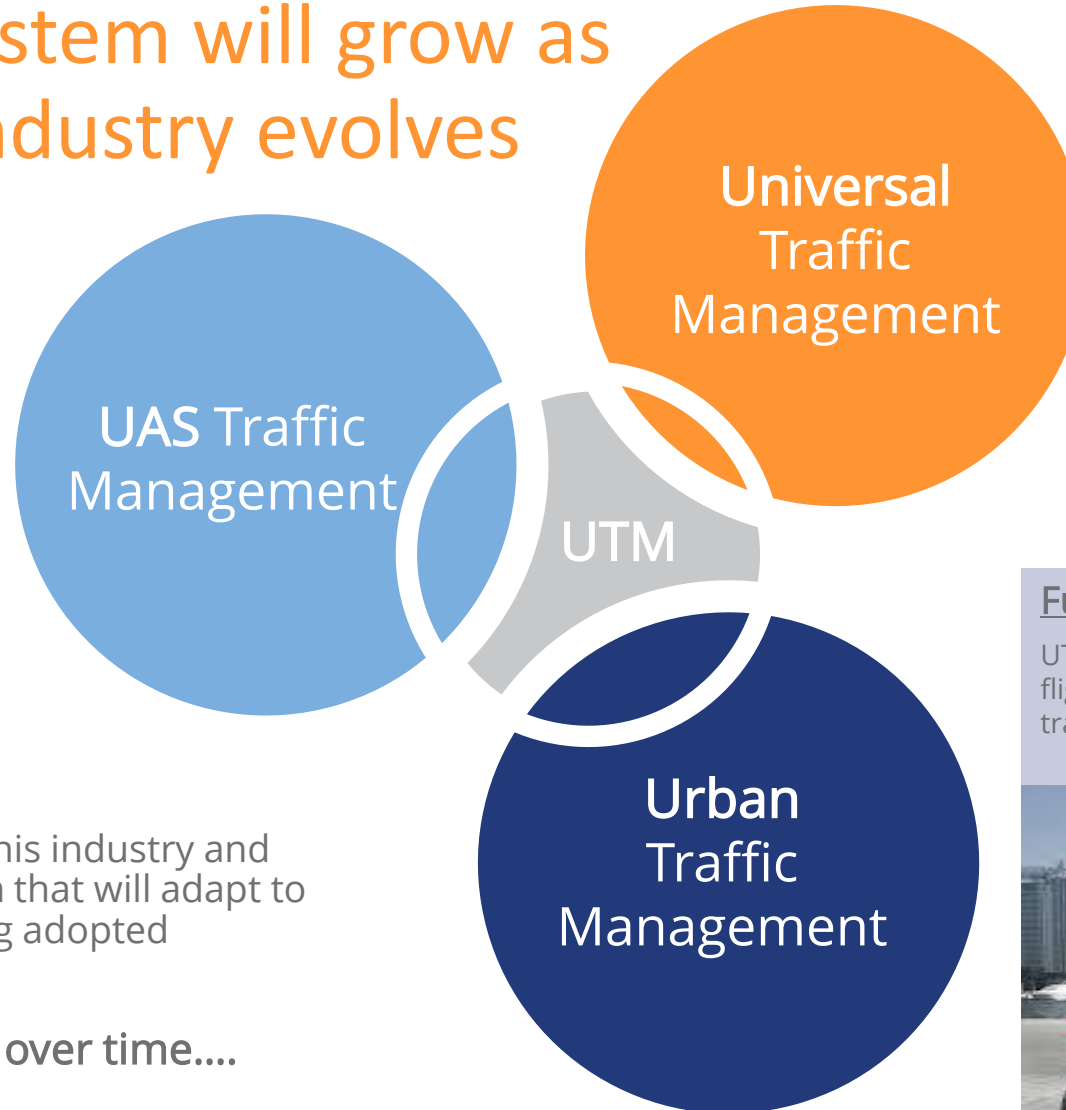

Today

UAS traffic management with a high degree of automation and a high level of integration with manned air traffic

The UAS industry is rapidly evolving
UTM is helping to guide and shape this industry and provides a flexible software platform that will adapt to the standards and conventions being adopted

UTM as an acronym will change over time....

Tomorrow

UTM will evolve traditional ATM systems to a highly automated traffic management system for all users of a common airspace

Future

UTM will enable combined surface travel and flight into single integrated journeys as urban transport becomes multi-modal

Urban Air Mobility (UAM)

Implications for policy-makers

- Support **innovation and development** of a nascent industry that can provide commercial benefits and other spin-offs for Canada – *involve other Ministries*
- Develop a **national vision and roadmap** for UTM that will enable BVLOS drone operations and UAM – *in progress*
- Encourage the **development of an ecosystem** where stakeholders can collaborate, coevolve and compete – *in progress*
- Encourage **demonstrations of use cases** that address real needs of society – *in progress*
- Develop **enabling legislation and performance-based regulations** that address safety, security, privacy, environmental sustainability – *significant work ahead*
- Canada is in a unique position: technical know-how; wide open spaces and wide range of applications; involvement and leadership in international standard-setting

The logo for eh&a is displayed in the top right corner. It features the letters 'eh' in a light blue color, followed by an ampersand '&' in white, and the letters 'a' in a light blue color. The font is a bold, sans-serif typeface.

eh&a

The background of the entire image is a photograph of an airplane's wing and tail section, viewed from a low angle looking up. The wing is white and extends from the bottom left towards the center. The tail fin is dark blue and located in the upper left. The sky is a clear, vibrant blue with some wispy white clouds visible near the horizon.
